

This assignment is similar to the event numbers printing you guys have already done.

Step 1: Accept a number from command line

Step 2: Once user enters the number print and show the number to user

Step 3: Ask the user how many odd numbers they wish to print and accept that from command line

Step 4: Once user enters the number print and show the number to user

Step 5: Print the N (=number entered in step 3) odd numbers after the number entered in step 1.

Please note, user can enter an odd or even number at Step 1

Sample output,

```
Enter a number:
```

```
